

# SD Series Lineset Covers

The **SlimDuct SD series** is a precision engineered system of prefabricated PVC duct and fittings which is designed to conceal and protect external surface mounted refrigeration linesets as used in Minisplit and ducted split AC systems.

They can also be used to conceal drain hose, electrical wiring, cable or telephone wiring and water or drain pipes.

This series comprises a full range of duct and fittings which are extruded and/or injection molded from weatherproof PVC, which meets the requirements of the current UL -94V-0 specification and is suitable for temperatures from -4 to 140 degrees F.

All components are split to facilitate easy installation for both new and retrofit applications and to permit easy subsequent disassembly for inspection or additions.

**SlimDuct SD** series is weather resistant, available in 3 standard colors of Brown, White and Ivory to suit all building color schemes and incorporates internal fixings to eliminate external fixing brackets.

All fittings are assembled with stainless steel screws to eliminate rust marks.

4 sizes are available, ranging from a nominal 2.5" x 2.25" (SD-66), 3" x 2.5" (SD-77), 4" x 2.75" (SD-100) to 5.5" x 3" (SD-140).

This allows the system to accommodate any size lineset, from a 1 ton Minisplit all the way up to a 50 ton ducted split system or multiple linesets from a multi zone Minisplit system.

14 different fittings including couplers, elbows, reducers and flexible offsets enable the installer to cater to even the most complicated lineset configuration.

**Easy to install.**

**Easy to access.**

**Easy to look at.**

**The SlimDuct SD series provides a perfect blend of style, form and function.**
